ACCESSION NR: AR5005453

characterize the statistical time variation of the corona-current density; specifically, they establish connection between these variations and the ionization coefficient and the mean free path. The new equations provide a physical interpretation for these time constants: (1) for electrons, the time constant is determined by the cross-section for elastic collisions; (2) the mean real cross-sections of production and collision of negative ions determine the time dependence of the negative-ion component in the avalanche discharge; (3) as the

are proportional to the fill-gas pressure, microtopography, etc.

AUTHOR: Orlov, N. N.

TITLE: Corona discharge in a coaxial cylindrical field

CITED SOURCE: Tr. Kiyevsk. politekhn. in-ta, v. 42, 1963, 167-177

TOPIC TAGS: corona discharge, corona discharge theory

TRANSLATION: Formulas describing the characteristics of a corona between coaxial electrodes are developed; the discharge current is determined by 3 types of stationary statistical processes. The discharge current is represented as a carrier: positive ions, negative ions, and electrons; this principally differs from the Townsend-Rogovsky theory which does not specify the nature of negative charges. The total current is determined as a sum of two components: a systematic component determined by the motion of particles in the direction of the fields and a statistical component which takes into account possible deviations of the particle motion due to collisions. Autocorrelation functions of the statistical.

ORLOV, N. P.

"The Problem of Specificity in Parasitology and Its Significance for the Resolution of Practical Problems".

Tr. In-ta Zool. AN KazSSR. No. 1, pp 11-24, 1953.

The evolution of parasites proceeds by means of adaptation to specific species of hosts, specific organs, tissues of cells, age group of the host, etc. Examples of host, regional, age and seasonal specificity of parasites are given. Specificity is historically complex, conditioned by factors of adaptation of parasites to a definite group of hosts, place of localization, age of host, and season of parasitization. Regional, age and seasonal specificity of parasites must be considered in the diagnosis, medical treatment, and prophylaxis of diseases caused by them. (RZhBiol, No. 10, 1955)

Orig Pub : Tr. Alma-Atinsk. zoovet. in-ta, 1957, 10, 167-176

Abstract : In the author's experiments the use of biostimulants (ACS) was tending to promote the acceleration of the manifestation and the increase of the intensity of the macroorganism's reaction to chemotherapeutic preparations of 13 animals which were affected with theileriasis and were treated with a combined application of chemical preparations and ACS, 12 animals recovered. The positive result of the treatment coincided with a positive leukocytic reaction. In order to obtain a leukocytic reaction

TITLE : Measures for the Control of Trichinelliasis
ORIG. PUB. : Vestn. s.-kh. nauki, 1958, No 2, 73-79
ABSTRACT : Due to systematic trichinoscopy, trichinelliasis has decreased in a number of foreign countries and in the Soviet Union. However, until recently, the individual outbreaks of the infection have been registered among humans as a result of the use of infected pork and, more frequently, of the meat of wild animals (badger, bear and others). Along with the strengthening of well-known

PERIODICAL: Atomnaya Energiya, 1957, Vol 3, Nr 8, pp 162-166 (U.S.S.R.)

ABSTRACT: In April 1957 an isotope Conference took place in Moscow which was attended by more than 3000 delegates of 1016 different firms and institutes. Altogether, 444 papers were read which were distributed over 4 departments: 1.) The technical and industrial use of isotopes, 2.) Chemistry, 3.) Biology, medicine, agriculture, 4.) The production of isotopes and γ -rays.
